

CAVESHEN RAJMAN

Software Engineering Manager

Cape Town, South Africa · LinkedIn: [linkedin.com/in/caveshen](https://www.linkedin.com/in/caveshen) · Portfolio: caveshen.github.io

SUMMARY

Since 2015 I have worked in the software industry and mastered the Software Development Life Cycle, from ideation to outcome. Along the way I found my calling as a leader and mentor, empowering people to grow their careers while leading the charge in delivering the best solution for the problem at hand.

PROFESSIONAL SKILLS

Software Engineering, Systems Analysis and Design, Project Management, Change Management, Stakeholder Management, Strategic Decision-making, Coaching and Mentoring, Technical Documentation, Outcomes-based Delivery

TECHNICAL SKILLS

VueJS, React, Angular, .NET, Spring, GraphQL, Azure, AWS, Power BI

PROFESSIONAL EXPERIENCE

Software Engineering Manager

Derivco, Cape Town, South Africa | May 2025 – Present

Leading two high-performance, high-functioning full-stack software development teams responsible for two core path flows within the company: the Player Account Management product suite and the Player Balance Ledger product suite.

- Full end-to-end ownership from ideation to roadmap to delivery to support
- High throughput, processing 100+ billion requests per month
- High reliability, observability, and security
- The backbone of many core flows with 99.98% uptime
- Fully compliant with EUGDPR, ISO27001, and other relevant regulations

In this role I wear many hats including Business Analysis, Product Management, Software Engineering, DevOps, Quality Assurance, Automation, and Project Management. I have also led teams leveraging AI initiatives to improve turnaround time and software quality, including developing key organisational tools:

- AI assistant integrating Azure and ITSM tooling to provide change and release details to auditors
- Automated change management product orchestrating ITSM processes using Azure pipelines
- Automated support service for processing and resolving customer tickets

Senior Software Development Engineer in Test, Level 1

Derivco, Cape Town, South Africa | June 2024 – May 2025

Hybrid developer and tester role spanning the full Software Development Life Cycle: a full-stack software engineer with particular focus on software quality, alongside development, maintenance, support, and optimisation.

- Feature, CI/CD, and automation development and testing — everything-as-code, manual only when necessary

- TDD, BDD, and other testing-driven initiatives; final signoffs on development prior to release with testing artifacts and reports
- Cross-department projects; mentoring and coaching team members; enforcing clean code, quality standards, and design patterns

Senior Software Engineer — Project Lead

Entelect, Cape Town, South Africa | April 2022 – May 2024

Software consultancy position providing technical expertise, leadership, and stakeholder management for eBay Mexico, Adevinta, FNZ UK, and MunichRe Insurance.

- Acting Team Lead at eBay Mexico, Adevinta, and FNZ UK: performance management, product management, software analysis and design, and stakeholder reporting
- Project Lead at MunichRe, combining Team Lead and Senior Engineer duties: performance, product, and stakeholder management, coaching, and reviews
- Spent 80% of my time designing, developing, testing, deploying, and supporting software products, primarily within the insurance sector
- Delivered new features, bug fixes, technical-debt reduction, and new architecture to improve performance on existing systems
- Assisted with compliance and governance processes, software documentation, creation and enforcement of agile and SDLC lifecycles, and change management

Senior Software Developer (Technical Lead)

Derivco, Durban, South Africa | January 2015 – March 2022

Technical Lead within the Quickfire BackOffice department, responsible for large-scale, high-performance campaign creation and tracking tools, collaborating across four geographic locations with four teams of thirty people in total.

- Progressed from Production Tester to Developer to Technical Lead
- Worked with architects on high-level architecture for campaign-based products, following an IDesign approach to encapsulate the volatility of downstream dependencies (microservices)
- Founded the Campaign Manager Design Board, with developers from each team, to improve technical discussion and decision-making across the SDLC
- Responsible for Work Breakdown Structure creation, Epic and Feature creation on Azure DevOps, and outcomes-based delivery and reporting
- Responsible for stakeholder and change management: project status, risks, blockers and mitigation, prioritisation, and delegation
- Documented all strategies: naming conventions, branching and merging, automation-first testing focused on Test-Driven Design, monitoring, compliance, and feature flagging

EDUCATION AND TRAINING

Bachelor of Commerce, Information Systems & Technology

University of KwaZulu-Natal, Durban | 2014

Certified Tester, Foundation Level (ISTQB) | 2015

Crucial Conversations, Derivco | 2018

Personal Mastery, Derivco | 2019

Legitimate Leadership, Entelect | 2024
